

**DuArt's worldwide recognition, and our more than 90 years of service, makes us the most suitable company to handle your film scanning and/or restoration services.**

## **FILM DIGITIZATION**

The Scanity 4k HDR Film scanner, is a versatile, high speed, film scanning solution, suitable for feature film mastering, EDL/conform scanning, low resolution browsing, archive and restoration, as well as digital intermediate scanning. The Scanity offers exceptional versatile and safe film handling. Shrinkage compensation up to 5% and handles irregular warped or twisted film using contactless scan processing.

## **DIGITAL RESTORATION**

Our digital film restoration work is done with Phoenix restoration software. The Phoenix suite of products is designed to produce great results, fast, and with less manual intervention. The DuArt restoration seasoned team expertly handles dust removal, scratches, stabilization of frames, warping, cut & tears, staining, color fading, shrinkage and more.

## **AUDIO RESTORATION**

DuArt also provides Audio Restoration for optical or magnetic tracks that contain unwanted artifacts like hiss, pops, clips, and distortion caused by scratches, dust, fogged image or shrinkage. Using numerous audio spectral repair tools, such as Izotope's Production Suite, we can sweeten any audio track for optimum playback.
